Foreword

Collecting and making available information pertaining to solid-waste-related research, demonstration projects, and other activities was originally authorized by section 204(b) of the 1965 Solid Waste Disposal Act, Public Law 89-272. The collection and dissemination of solid waste information was more recently mandated by the Resource Conservation and Recovery Act of 1976 (Public Law 94-580), section 8003, which amends the Solid Waste Disposal Act. The following comprehensive catalog lists publications and other educational materials on solid waste that have been published or collected by the U.S. Environmental Protection Agency in response to these directives. The subject index reflects the entire scope of the work undertaken by EPA's solid waste program from 1966 to the present and is intended for researchers.

Introduction

Information Materials Available from EPA on Solid Waste Management

The solid waste management information materials from the U.S. Environmental Protection Agency (EPA) are from various sources. There are EPA publications and other materials reporting on results of the research, development, and demonstrations authorized by the Solid Waste Disposal Act of 1965, as amended by the Resource Conservation and Recovery Act of 1976. This far-reaching Federal program that includes technical and financial assistance and research, development, and demonstrations has generated solid-waste-related projects in many fields from 1966 to the present. Reports from grantees and contractors are published by EPA as soon as available. Presentations and policy statements by key personnel and results of technical investigations conducted by EPA staff are printed by EPA or submitted to professional journals, so that the reports will reach the most appropriate audience. In the latter case, reprints are frequently purchased and distributed by EPA. Conference proceedings, findings of various commissions and study groups, and other collateral literature are also made available as supplies permit.

In addition to the titles available from EPA, from various library systems, or from the Superintendent of Documents, over 520 reports on grant and contract activities relating to solid waste management are available for purchase from the Department of Commerce National Technical Information Service (NTIS). These reports are issued through NTIS to make the data most readily available to the technical community. Author, title, and subject indexes supplementing this volume refer to both EPA-published documents and the NTIS reports. The subject index precedes the reports section, followed by title and author indexes. An integrated list of EPA publications and NTIS reports, by title, is also included. In the back of the volume is an NTIS order form, an EPA solid waste information-materials request form, and a list of U.S. Government Depository Libraries.

In gathering and publishing this information on solid waste management, EPA hopes to assist those engaged in the task of finding ways to manage the Nation's burden of solid wastes safely and efficiently while also contributing to efforts to conserve energy and our natural resources.

Guidelines, Regulations, and Basic Information
Related to the Resource Conservation and Recovery Act of 1976

The following materials have been selected from this catalog to provide an orientation to some of the issues related to the national effort to improve solid waste management. resource/energy conservation, solid waste systems management and land protection, and hazardous wastes management. To order, see form for EPA solid waste publications in the back of this catalog. There is no charge for single copies of EPA publications.

List of Depository Libraries as of August 1, 1977

Under provisions of Title 44 of the United States Code, certain libraries are designated depositories for Government publications. Through them Federal Government documents are made available to residents of every State, District of Columbia, Guam, Puerto Rico, and the Virgin Islands. Distribution to the libraries is made by the Office of the Superintendent of Documents.

It is sometimes impossible to obtain desired publications by purchase from the Superintendent of Documents. Stocks may have been exhausted or the document may be permanently out of print. In these instances the depositories render an invaluable service by keeping such publications permanently available. Every Government publication cannot be consulted at all depository libraries. Designated Regional Depositories are required to receive and retain one copy of all Government publications made available to depository libraries either in printed or microfacsimile form. All other libraries are allowed to select the classes of publications best suited to the interests of their particular clientele.

The following list shows the location, the name of the library, the year the library became a depository, and the administrative control number assigned to each.
